Springfield, IL 62794-9276

Subject: Calumet TARP System Groundwater Monitoring Annual Report for the
Year 2005

Dear Ms. Willhite:

Enclosed are three copies of "Groundwater Monitoring Report, Tunnel and Reservoir Plan
Calumet Tunnel System 2005 Annual Report."

Very truly yours,

Louis Kollias
Director
Research and Development

**GROUNDWATER MONITORING REPORT
TUNNEL AND RESERVOIR PLAN (TARP)
CALUMET TUNNEL SYSTEM
2005 ANNUAL REPORT**

Introduction

This report contains 2005 data for the TARP Calumet Tunnel System compiled from the monitoring of the groundwater level elevations in the observation wells and monitoring of water quality in the water quality monitoring wells. The observation and monitoring wells are located along the Calumet Tunnel System. The tunnel between Crawford Avenue and the Calumet Water Reclamation Plant has four water quality wells (QC-1, QC-2, QC-2.1, and QC-2.2) and 11 observation wells (OC-1 through OC-11). The tunnel between 140th Street and Indiana Avenue has 17 water quality wells (QC-3 through QC-19). The tunnel on the Torrence Avenue leg has nine water quality wells (QC-20 through QC-28). The tunnel along the Little Calumet leg has nine water quality wells (QC-29 through QC-37).

Water quality monitoring wells QC-1, QC-2, QC-20, QC-23, QC-24, and QC-26 are sampled six times per year (Illinois Environmental Protection Agency [IEPA] memorandum July 9, 2004). Water quality monitoring wells QC-2.1, QC-2.2, QC-3 through QC-7, QC-9 through QC-19 (QC-8.1 is a dry well), QC-21, QC-22, QC-25, QC-27 and QC-28 are sampled three times per year (IEPA memo July 9, 2004). Water quality monitoring wells QC-29 through QC-37 are sampled six times per year as required. Water level readings are taken at the same frequency. Groundwater observation wells OC-1 through OC-11 are sampled once every two weeks.

Monitoring Data

Appendix AI contains a location map of observation wells OC-1 through OC-11 located along the Calumet Tunnel System.

Table AII-1 in Appendix AII contains groundwater level observation data for 2005 for observation wells OC-1 through OC-11 shown in Appendix AI. Table AII-1 also contains the yearly minimum, mean, and maximum water level elevations of each observation well.

Appendix AIII contains a location map of the water quality monitoring wells QC-1, QC-2, QC-2.1, QC-2.2, QC-3 through QC-7, and QC-9 through QC-37 located along the Calumet Tunnel System.

Tables AIV-1 and AIV-2 in Appendix AIV contain water quality monitoring data for 2005 pertaining to the water quality wells QC-1, QC-2, QC-2.1, QC-2.2, and QC-3 through QC-37 (except for QC-8.1 which is a dry well) along the Calumet Tunnel System shown in Appendix AIII.

All of the wells in the Calumet system were visited for the required number of samples. However, in some instances the samples could not be collected. Water quality well QC-20 was not sampled on January 13, 2005, March 8, 2005, May 18, 2005, August 25, 2005, November 1, 2005, or December 16, 2005, because the pump housing broke and the pump was inaccessible. QC-20 is a very deep well and as such it has been difficult to locate the pump. Industrial Waste Division personnel are working to resolve this problem with the assistance of the Maintenance and

Operations Department. Water quality well QC-29 was not sampled on March 23, 2005, because the pump could not be activated. Water quality well QC-30 could not be sampled on January 6, 2005, or March 23, 2005, because there was a pump malfunction. Water quality well QC-31 could not be sampled on March 23, 2005, because of a pump malfunction. Water quality well QC-32 could not be sampled on March 23, 2005, May 5, 2005, July 20, 2005, September 1, 2005, or November 10, 2005, because there was insufficient water in the well to collect a sample. Water quality wells QC-33 through QC-37 were not sampled during 2005 because there was insufficient water in the wells to collect a sample.

Summary of Data

Observation Wells Water Level Elevation Data. In Figure 1, the 2005 ground-water level elevation data for the observation wells (OC-1 through OC-11) of the Calumet Tunnel System have been plotted. In this figure, yearly minimum, mean, and maximum water level elevations of all 11

wells are plotted to show fluctuations in the water level elevations during 2005. Table AII-1 in Appendix AII contains the entire groundwater level elevation data for 2005 for all the observation wells in the Calumet Tunnel System.

Water Quality Monitoring Wells Data. Tables 1 through 8 contain summary statistics of the water quality parameters for 2005 for water quality monitoring wells QC-1, QC-2, QC-2.1, QC-2.2, and QC-3 through QC-37 (except for well QC-8.1 which is a dry well) in the Calumet Tunnel System. These statistics were computed from the data collected from each water quality monitoring well in 2005. The summary statistics include minimum, mean, maximum, standard deviation (Std. Dev.), median and coefficient of variation (Coeff. Var.) for the nine water quality parameters analyzed during 2005. The nine water quality parameters are: chloride (Cl), conductivity (Cond.), fecal coliform (FC), hardness as CaCO_3 (Hard.), ammonia as $\text{NH}_4^+ \text{-N}$, pH, sulfate (SO_4), total dissolved solids (TDS), and total organic carbon (TOC).

*For purposes of statistical evaluation, fecal coliform values less than 1 were set equal to 1.

**A zero value indicates that the test result was below the detection limit (DL). The DLs for sulfate and total organic carbon are 0.4 mg/L and 0.3 mg/L, respectively.

¹Unfiltered samples, all others were filtered through 0.45 μm membrane.

²Zero values indicate that the test result was below the detection limit (DL). The DL for ammonia nitrogen is 0.02 mg/L.

 RECHARGE DATA FOR WATER QUALITY MONITORING WELLS
 QC-1, QC-2, QC-2.1, QC-2.2, QC-3 THROUGH QC-7, AND QC-9 THROUGH QC-37
 IN THE CALUMET TUNNEL SYSTEM

Well	Date of Sampling	SO ₄ mg/L	TOC mg/L	TDS mg/L	FC ¹ cfu/100 mL	Water Elevation ² Feet	Recharge ³ Hours
QC-37	9/15/05				Well could not be sampled		
QC-37	11/10/05				Well could not be sampled		

¹Unfiltered samples, all others were filtered through 0.45 µm membrane.

²Water level elevations are relative to Chicago City Datum.

³Refers to elapsed time after initial drawdown before the well recovered sufficiently for sampling.

⁴A zero value indicates that the test result was below the detection limit (DL). The DLs for sulfate and total organic carbon are 0.4 mg/L and 0.3 mg/L, respectively.
