GROUND-WATER RESOURCES OF NORTHWESTERN INDIANA

Preliminary Report: Porter County

By J. S. Rosenshein

ABSTRACT

Porter County in northwestern Indiana has an area of about 425 square miles. Glaciofluvial sand and gravel of Pleistocene age are the chief source of ground water for domestic and stock, industrial, and public supplies. Wells in this source generally are less than 150 feet deep and yield from 5 to more than 1,000 gpm. The underlying bedrock is not used as a source of ground water except for the rocks of Devonian age which are utilized in a few places. Field chemical analyses show that the water from the unconsolidated rocks is hard and the hardness of water is generally greater than 200 ppm and less than 500 ppm. In much of the county the concentration of iron exceeds the maximum concentration recommended in the U. S. Public Health Service drinking-water standards for iron and manganese together.

This preliminary report contains tabulated records of about 650 wells and test holes giving information about well construction, water level, condition of occurrence, and characteristics of water-bearing material; selected logs for about 270 wells and test holes giving driller's description of material penetrated and author's interpretation of their geologic age; records of 16 springs giving geologic source, use, water discharged, and other pertinent data; results for 109 field chemical analyses giving hardness of water, the bicarbonate, carbonate, chloride, iron, and sulfate content; and water levels in 9 observation wells indicating the magnitude of short-term and long-term water-level fluctuations in the consolidated and unconsolidated rocks. These basic data include much of the material to be used in an interpretive report on the ground-water resources and geology of the area.

A base map of Porter County shows the location of each well, test hole, or spring listed in this report. Additional maps show the availability of ground water in the county and the distribution of the hardness of water in the unconsolidated rocks of Pleistocene age.

INTRODUCTION

Purpose and Scope

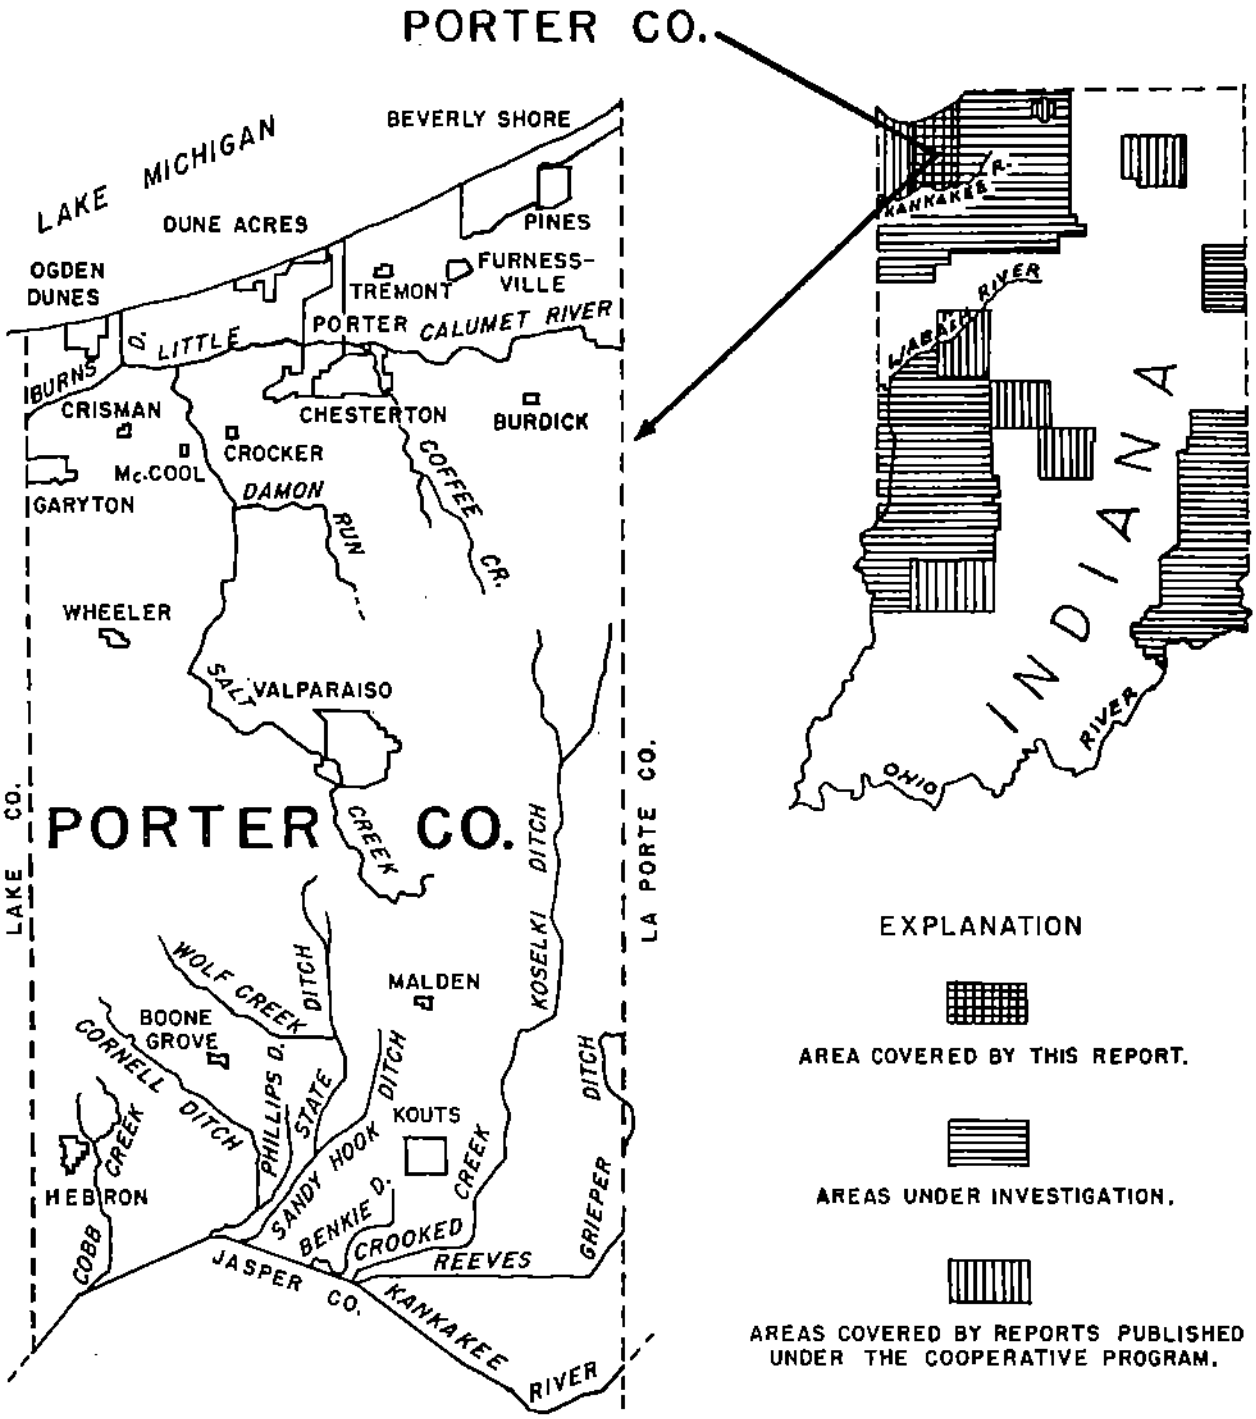
An investigation of the ground-water resources and geology of ten counties in northwestern Indiana has been in progress since June 1954. This investigation is being made by the U. S. Geological Survey in cooperation with the Division of Water Resources, Indiana Department of Conservation, as a part of a broad program of these agencies to inventory and evaluate the ground-water resources of Indiana.

This report is the second of a series of preliminary reports to be published on the ground-water resources and geology of northwestern Indiana. The purpose of this report is to make the basic data collected during the investigation available to the public and to provide a preliminary evaluation of the ground-water conditions and geology as an aid to development of ground-water resources. A more detailed and comprehensive analysis is in progress and will be published in an interpretive report on the ground-water resources and geology of the area.

The investigation was made under the general direction of A. N. Sayre and P. E. LaMoreaux, successive Chiefs of the Ground Water Branch of the Geological Survey, and under the immediate supervision of C. M. Roberts, District Geologist.

Location and Areal Extent

Porter County is in the northwestern part of Indiana (fig. 1). The county is a somewhat elongated rectangle with irregularly shaped northern and southern boundaries and includes about 425 square miles. It is bounded on the north by Lake Michigan, on the south by Jasper County, on the west by Lake County, and on the east by La Porte County.



SEE PAGE 129 FOR LIST OF PUBLISHED REPORTS.

FIGURE 1.--Map of Indiana showing area covered by this report, areas under investigation and areas covered by reports published under the cooperative program.

Well-Numbering System

A numbering system is used to locate and identify the wells, test holes, and springs in this report. The number that is assigned each well, test hole, or spring indicates its location according to the official rectangular public-land survey. For example, in the number for well 35/5W-26R1 the numbers preceding the hyphen indicates that the well is in T. 35 N., R. 5 W. The first number after the hyphen indicates the section in which the well is located. Each quarter-quarter section (40-acre tract) within a section is assigned a letter symbol as shown on figure 2. Within the quarter-quarter section the wells, test holes, and springs are numbered consecutively. Therefore, well 26R1 is the first well listed in SE¼SE¼ sec. 26, T. 35 N., R. 5 W.

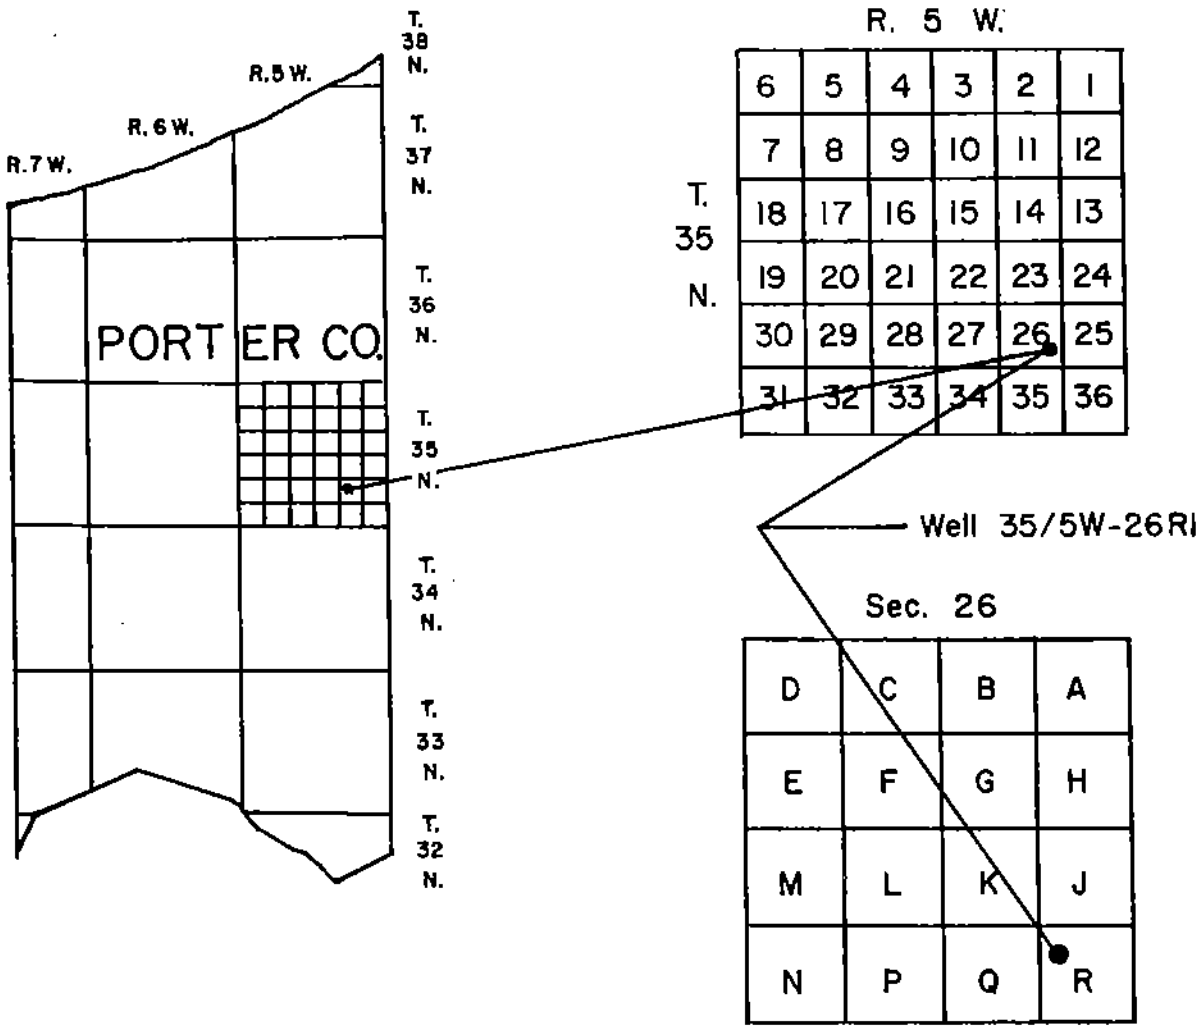


FIGURE 2.--Sketch showing well-numbering system.

Acknowledgments

The author thanks all persons who contributed time, information, and assistance during the collection, tabulation, and processing of data for this report. H. C. Kost of the Indiana Department of Conservation assisted in the processing of data in the field. Well drillers, whose names are listed in the table of well records, furnished much of the information summarized in tables 2 and 3.

The author also thanks the following government agencies which provided information for the report: Divisions of Oil and Gas and Water Resources, Indiana Department of Conservation; Indiana State Highway Department; Indiana Toll Road Commission; Indiana State Board of Health; and U. S. Corps of Engineers.

DATA COLLECTION AND PROCESSING

The well data were collected from drillers, water-works superintendents, owners, and others. The well records obtained from the drillers were of two types--written records and reports from memory. Tentative driller's locations were checked against the property records in the County Courthouse to verify the location, to locate the property, and to obtain the name of the current property owner. Discrepancies between driller's location and the location of property shown in the plat books were corrected. The locations of wells were checked further in the field if major discrepancies existed between the driller's location and property record as shown in the plat books, if the location given by the driller could not be verified from county records, or if the verified location was not sufficiently accurate to be used.

Plate 1 shows the location of water wells and test holes, test holes drilled for purposes other than water supply, and springs. Most of these locations are shown to the nearest 10 acres. The basic data for the wells and test holes are summarized in table 2. In addition, selected driller's logs of wells and test holes and author's interpretations of the geologic age of the materials encountered are given in table 3. The basic data for the springs are given in table 4.

Samples of water were collected at the time the well sites were visited. These water samples were analyzed in the field office for hardness, alkalinity (carbonate and bicarbonate), chloride, and sulfate content by standard titration methods. The alkalinity is expressed as carbonate and bicarbonate. The total iron content was determined at the well site immediately after the water sample was collected. A visual method was used to determine the iron concentration in parts per million by matching the color of the treated sample to that of liquid-color standards having a known iron concentration. The results of the field chemical analyses (table 5) were used to select sites for collecting larger water samples for more comprehensive and accurate chemical analysis by the laboratory of the Geological Survey.

Observation wells were established prior to and during the investigation in order to determine the factors affecting the changes in storage in the ground-water reservoir. Table 6 contains the water-level data collected from these wells. The observation wells were chosen so as to obtain water-level information from artesian and water-table aquifers. Whenever possible, the wells were established at sites where the factors affecting the water levels in the aquifer were chiefly due to natural causes.

GENERAL GEOLOGY AND SOURCES OF GROUND WATER

The oldest known consolidated rocks underlying Porter County are of Ordovician age. These rocks consist of dolomitic limestone and shale and are overlain by dolomitic limestone, shale, and dolomite of Middle Silurian age. The rocks of Ordovician and Silurian age are not used as a source of water supply in the county because they generally lie more than 300 to 400 feet below the surface and the water they contain generally has more than 5,000 ppm (parts per million) dissolved solids.

The rocks of Middle Silurian age are overlain by dolomitic limestone of Middle Devonian age. These rocks underlie blue-black bituminous shale of Devonian age (Logan, 1932) or Devonian and Mississippian age (Patton, 1956). This shale is listed as Late Devonian age in table 3. Few water wells have been drilled into the rocks of Devonian and Devonian and Mississippian (?) age, and they are not extensively used as a source of water in Porter County.

The bedrock is overlain by unconsolidated glacial drift of Pleistocene age. The drift forms several prominent topographic features in the county (Leverett and Taylor, 1915; Wayne, 1958), the Valparaiso moraine which trends northeast-southwest across the central and north-central part, the beach-lines and lake bottoms of glacial Lake Chicago in the northern part, and the glaciofluvial plain in the southern part.

The unconsolidated rocks of Pleistocene age range in thickness from about 30 to more than 250 feet. The rocks consist of glaciofluvial sand and gravel, clayey till, and glaciolacustrine clay, silt, and sand. Glaciofluvial sand and gravel underlies most of the county and locally is more than 150 feet thick. The sand and gravel is the chief source of ground water for domestic and stock, industrial, and public supplies. Wells are generally less than 150 feet deep in this aquifer and yield from 5 to more than 1,000 gpm.

The unconsolidated rocks of Pleistocene age are overlain locally by thin alluvium, eolian sand, and organically rich sand, silt, and clay of Recent age. The deposits of Recent age are generally too thin to be a source of ground water.

Plate 2 shows the availability of ground water in the unconsolidated rocks underlying the county. Plate 3 shows the distribution of the hardness of ground water from the sand and gravel deposits of Pleistocene age.

CONFINED AND UNCONFINED CONDITIONS

Ground water occurs in the consolidated and unconsolidated rocks of Porter County under confined (artesian) conditions or under unconfined (water-table) conditions. Under confined conditions the saturated water-bearing material is overlain directly by relatively impervious material, and the water will rise above the level at which it is encountered in the water-bearing material. Under unconfined conditions the water-bearing material is overlain directly by permeable unsaturated material, and the water will not rise above the level at which it is encountered.

TYPES OF WELLS

Drilled, driven, and jetted wells are the principal types of water wells used in Porter County. Most water wells 3-inches or more in diameter are constructed by the cable-tool, or percussion, method, but a few wells have been drilled by the rotary and reverse-rotary methods. When the water-bearing material is sand and gravel, the well is generally finished with a well screen set in the aquifer below the bottom of the well casing. (See Rosenshein and Cosner, 1956, for a detailed description of a well screen.) A modification of this type of well, the gravel-packed well, has a gravel lining inserted between the well screen and the water-bearing material. When the aquifer is consolidated rock, the well casing is generally driven a short distance into the rock, and the well is finished as an open hole.

Water wells less than 3-inches in diameter are constructed in unconsolidated material by driving or jetting. The driven well consists of a small-diameter pipe having a drive point attached to the end, which is driven into shallow water-bearing material. The jetted well is constructed by forcing water under pressure out of a hollow-rod or small-diameter drill pipe that is fitted with a jetting bit. As the material is washed out of the hole ahead of the casing, the casing is driven down into the hole. After the water-bearing material is penetrated the well is generally finished with a well-point screen set in the water-bearing material below the bottom of the casing. Table 1 relates the grain-size in inches and millimeters to the slot and the gauze size of screens commonly used in water wells.

Oil or gas test holes in Indiana generally are drilled by the cable-tool method. Structure test holes for foundations and bridges generally are drilled by the wash-boring method. In this method test hole samples usually are collected by driving a sampling tube into the material after specific intervals of boring.

Table 1.--Grain size and equivalent screen openings

Grain size: After Wentworth (1922).
Equivalent screen openings: From commercial catalogs for water-well supplies.
Slot size: In thousandths (0.001) of an inch.
Gauze size: Number of wire strands per lineal inch.

Material	Grain size		Equivalent screen opening	
	Inches	Millimeters	Slot size	Gauze size
Gravel	>0.08	>2	>80	-------
Very coarse sand	.04 - .08	1 - 2	40 - 80	>20
Coarse sand	.02 - .04	.50 - 1	20 - 40	40 - 20
Medium sand	.01 - .02	.25 - .50	10 - 20	60 - 40
Fine sand	.005 - .01	.125 - .25	6 - 10	90 - 60
Very fine sand	.002 - .005	.062 - .125	-------	-------
Silt	.00015 - .002	.004 - .062	-------	-------
Clay	<.00015	<.004	-------	-------

SUMMARY

Preliminary evaluation of the basic data shows that adequate quantities of ground water are available for domestic, stock, and locally for public and industrial supplies from sand and gravel of Pleistocene age. The rocks of Devonian age, underlying the glacial deposits, are used only as a minor source of water, and the older bedrock is not used as a source in the county.

The quality of water from the rocks of Pleistocene age varies. The hardness of water is generally greater than 200 ppm and less than 500 ppm. In much of the county the iron content exceeds the U. S. Public Health Service drinking-water standards for use by interstate carriers for iron and manganese together.

RECORDS

The records of about 650 wells and test holes are given in table 2. The table contains information about well construction, water levels, yields and drawdowns, conditions of occurrence, thickness and characteristics of water-bearing materials, type of pump, and other data. The altitude of the land surface at all wells, except test borings, was interpolated from topographic maps. Altitudes of borings were leveled by the Federal or State agency for whom the borings were made.

Table 3 contains the selected logs of about 270 wells and test holes. This table gives the driller's description of the material encountered, pertinent remarks with regard to the material, and the author's interpretation of the geologic age of the material.

The records of 16 springs are given in table 4. The table contains information about the geologic source, use, the quantity of water discharged, chemical quality of the water, and other pertinent data.

The results of about 115 partial chemical analyses of water are given in table 5. Of this number 109 were determined in the field office of the Geological Survey, and 6 were determined by commercial laboratories. This table gives information about geologic source, temperature, concentration in parts per million (ppm) of iron, carbonate, bicarbonate, sulfate, chloride, and hardness of water. The U. S. Public Health Service standards for drinking water are given in the table headnotes for iron and manganese together, sulfate, and chloride. No standards have been established for hardness of water. However, with respect to hardness, water is generally classified as follows: 0-60 ppm, soft; 61-120 ppm, moderately hard; 121-200 ppm, hard; more than 200 ppm, very hard. Water having a hardness of more than 200 ppm requires softening for many purposes.

Table 6 contains the records of nine observation wells of which three were established during the investigation and the rest prior to the investigation. The water levels in the observation wells were obtained either by recording gages installed on the well or by manual measurements made with an engineer's steel tape calibrated to a hundredth of a foot. All water levels are in feet below land-surface datum. Daily highest water levels are given for the observation wells equipped with recording gages, and periodic water levels are given for the observation wells measured manually. Factors affecting the water levels in the observation wells are also indicated. The locations of these observation wells are shown on plate 1.

Table 2.--Records of wells and test holes in Porter County, Indiana

Well: See text for description of well-numbering system.
Altitude: Altitude of land-surface datum from topographic maps, except as noted in text p. 8.
Type of well: B, bored; Dn, driven; Dr, drilled; Du, dug; J, jetted.
Finish: Gp, gravel pack; Oe, open end; Oh, open hole; S, screen; dia, diameter in inches; g, gauze size; sl, slot size.
Character: G, gravel; Ls, limestone; Sd, sand.
Geologic age: D, Devonian; Pl, Pleistocene; S, Silurian.
Conditions of occurrence: C, confined; U, unconfined; see text for definitions of terms.

Water level: In feet below land-surface datum on date of completion of well, except where otherwise noted.
Use: D, domestic; De, destroyed; I, industrial; Ir, irrigation; N, not used; O, observation; P, public supply; S, stock; T, test.
Type of pump and horsepower: J, jet; L, lift; P, pitcher; S, submersible; T, turbine; numeral indicates rated horsepower of electric motor.
Remarks: Ca, field chemical analysis in table 5; dd, drawdown; gpm, gallons per minute; L, log of well included in report; lsd, land-surface datum; S, samples available for inspection.

Table 3.--Selected logs of wells and test holes in Porter County, Indiana

Well 32/5W-1H1

Type of record: Driller's log. Altitude: 665 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Drift	35	35	
Devonian system:			
Upper Devonian series:			
Shale	89	124	
Middle Devonian series:			
Limestone	231	355	

Well 32/5W-10R1

Type of record: Driller's log. Altitude: 663 feet.

Quaternary system:			
Recent and Pleistocene series:			
Drift	35	35	
Devonian system:			
Upper Devonian series:			
Shale	98	133	
Middle Devonian series:			
Limestone	13	146	

Well 33/7W-1G1

Type of record: Driller's log. Altitude: 712 feet.

Quaternary system:			
Recent and Pleistocene series:			
Drift	138	138	
Devonian system:			
Upper Devonian series:			
Shale, dark-brown	77	215	
Devonian and Silurian system; undifferentiated:			
Lime	45	260	
Lime	510	770	
Ordovician system:			
Upper Ordovician series?:			
Shale, green	10	780	
Lime, gray	5	785	
Lime, brown	10	795	
Lime and shale	25	820	
Shale, green	73	893	
Shale, dark	7	900	
Middle Ordovician series:			
Lime	107	1,007	
Lime	80	1,087	

Well 33/7W-15A3

Type of record: Driller's log. Altitude: 718 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Clay	45	45	
Sand, fine	8	53	
Sand, coarse	20	73	
Sand, fine	8	81	
Sand, coarse	7	88	
Gravel and sand	3	91	
Clay	34	125	
Devonian system:			
Upper Devonian series:			
Shale	21	146	

Well 34/5W-20D1

Type of record: Driller's log. Altitude: 715 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, yellow, and gravel; mixed	9	9	
Gravel and red sand	16	25	
Sand, gray	9	34	

Well 34/6W-4B1

Type of record: Driller's log. Altitude: 758 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, medium, brown	33	33	
Sand, brown, and medium gravel	24	57	
Sand, medium, gray	18	75	

Well 34/6W-4B2

Type of record: Driller's log. Altitude: 760 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, brown and blue	31	31	
Clay, blue, and gravel	11	42	
Sand, white, and gravel	21	63	

Well 34/6W-6B4

Type of record: Driller's log. Altitude: 787 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, hard, yellow	16	16	
Clay and sand; hard, gray, mixed	22	38	
Sand, hard, dirty, gray	3	41	
Sand, hard, gray-white	10	51	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Well 34/6W-6B4--Continued

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Sand, hard, dirty, gray	24	75	
Clay, soft, gray	2	77	
Sand, hard, gray-white	6	83	

Well 34/6W-12N2

Type of record: Driller's log from memory. Altitude: 715 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, blue	24	24	
Sand, yellow	21	45	
Sand, medium, gray	20	65	

Well 34/7W-1B4

Type of record: Driller's log. Altitude: 782 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, brown and blue	21	21	
Clay, blue, and gravel	10	31	
Gravel and sand; white	21	52	
Sand, white	16	68	

Well 34/7W-1B7

Type of record: Driller's log. Altitude: 785 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, brown and blue	21	21	
Clay, blue, and gravel	10	31	
Gravel and sand	42	73	
Sand, white	17	90	

Well 34/7W-12A1

Type of record: Driller's log from memory. Altitude: 783 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, yellow	22	22	
Sand, yellow	43	65	
Sand, very fine	25	90	
Sand, medium to coarse	20	110	

Well 34/7W-26A1

Type of record: Driller's log. Altitude: 732 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Loam, sand, and clay	12	12	
Clay, blue	20	32	
Sand, gray	23	55	

Well 34/7W-27M1

Type of record: Driller's log from memory. Altitude: 753 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, brown	21	21	
Clay, blue	21	42	
Gravel, hard	14	56	
Sand, white	14	70	

Well 34/7W-35A1

Type of record: Driller's log from memory. Altitude: 724 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, brown, and sand	21	21	
Sand, brown and white	21	42	
Sand, white	10	52	

Well 35/5W-2H6

Type of record: Driller's log. Altitude: 785 feet.

Quaternary system:			
Recent and Pleistocene series:			
Sand, brown	14	14	
Sand, brown, with pea gravel	9	23	
Pea gravel	8	31	Wet at 30 feet.
Sand and pea gravel	19	50	

Well 35/5W-6L1

Type of record: Driller's log. Altitude: 814 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay	25	25	
Clay and boulders	7	32	
Clay, gritty	9	41	
Sand, fine, yellow	30	71	
Sand, sharp	3	74	
Sand, fine	3	77	
Sand, sharp	2	79	
Sand, fine	9	88	
Sand, medium, gray	14	102	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Well 35/5W-6L1--Continued

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Sand, fine, and broken shale----	12	114	
Sand and broken shale----------	6	120	
Sand, fine, and shale----------	32	152	
Clay, soft, gritty-------------	3	155	
Sand, fine---------------------	11	166	
Clay, tough--------------------	1	167	

Well 35/5W-6L4

Type of record: Driller's log. Altitude: 810 feet.

Quaternary system:			
Recent and Pleistocene series:			
Top soil-----------------------	1	1	
Clay, gravel, and sand---------	14	15	
Sand, muddy--------------------	30	45	
Sand, medium, and broken shale--	48	93	
Sand, medium-------------------	25	118	
Sand, fine---------------------	8	126	

Well 35/5W-6L6

Type of record: Driller's log. Altitude: 805 feet.

Quaternary system:			
Recent and Pleistocene series:			
Muck---------------------------	11	11	
Clay with streaks of gravel----	17	28	
Clay and gravel----------------	5	33	
Clay, sandy, with streaks of gravel----------	29	62	
Sand, fine, muddy--------------	18	80	
Clay, sandy--------------------	10	90	
Sand, fine---------------------	34	124	

Well 35/5W-6L7

Type of record: Driller's log. Altitude: 805 feet.

Quaternary system:			
Recent and Pleistocene series:			
Fill---------------------------	4	4	
Muck---------------------------	3	7	
Clay---------------------------	9	16	
Sand---------------------------	5	21	
Clay---------------------------	37	58	
Sand with small pieces broken shale----------	30	88	
Sand, fine to medium-----------	41	129	
Clay, sandy, gray--------------	1	130	

Well 35/5W-6M1

Type of record: Driller's log. Altitude: 805 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Clay	33	33	
Sand, yellow	22	55	
Sand, muddy, gray	10	65	
Sand, fine, with shale	30	95	

Well 35/5W-6N1

Type of record: Driller's log. Altitude: 805 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, tough	10	10	
Clay, hard, gritty	29	39	
Gravel with shale	1	40	
Shale, broken	6	46	
Sand, medium, and shale	26	72	
Sand, fine	84	156	
Clay	4	160	

Well 35/5W-6P2

Type of record: Driller's log. Altitude: 808 feet.

Quaternary system:			
Recent and Pleistocene series:			
Soil and gritty clay	19	19	
Clay and boulders	2	21	
Gravel and clay	5	26	
Clay, sandy	20	46	
Sand, yellow	4	50	
Sand, coarse, yellow	7	57	
Sand, medium, gray	15	72	
Sand, coarse, gray	19	91	
Sand, fine	54	145	
Sand, fine, yellow	17	162	
Clay	3	165	

Well 35/5W-7E1

Type of record: Driller's log. Altitude: 822 feet.

Quaternary system:			
Recent and Pleistocene series:			
Soil and tough clay	10	10	
Clay, gritty	27	37	
Sand	8	45	
Gravel and sand	4	49	
Gravel with shale	7	56	
Shale	6	62	
Sand, fine, with shale	6	68	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Silt, sandy, black, and top soil	1	3	
Peat, marly, gray----------	4	7	
Sand, silty, loose, gray, with some gravel----------	7	14	
Silt, medium hard, sandy, gray, with some pebbles----------	5	19	
Sand, dense, gray, and gravel---	3	22	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Well 36/5W-17M10

Type of record: Driller's log. Altitude: 669 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Sand, brown, and clay fill	7	7	
Sand, silt, and peat; black	4	11	
Silt, gray, and marl	3	14	
Peat, black	6	20	
Silt, soft, gray, and marl	9	29	
Silt, stiff, gray, with embedded sand and gravel	7	36	

Well 36/5W-17M14

Type of record: Driller's log. Altitude: 674 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Fill; brown sand with trace of clay	8	8	
Silt, sandy, black	2	10	
Silt, soft, marly, gray	4	14	
Silt, gray, with some sand and few marly peat seams	12	26	
Sand, dense, brown, with trace of gravel	6	32	

Well 36/5W-17M17

Type of record: Driller's log. Altitude: 668 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Silt, sandy, brown	3	3	
Silt, soft, gray and yellow	1	4	
Clay, silty, organic, gray, with trace of marl	12	16	
Sand, brown, and gravel	10	26	
Clay, silty, gray, with sand and gravel	1	27	Till.

Well 36/5W-17M18

Type of record: Driller's log. Altitude: 706 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Fill; sandy silt and sand	2	2	
Sand, clayey, brown, with trace of gravel	32	34	
Clay, sandy, gray and brown, with trace of silt	6	40	
Sand, brown, with trace of clay and some hard streaks of peat	10	50	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Well 36/5W-17M18--Continued

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Peat, hard, black, with streaks of gray marly silt and some sand seams	32	82	
Clay, hard, silty, gray	4	86	Till.
Sand, brown and gray, and gravel	1	87	

Well 36/5W-17M19

Type of record: Driller's log. Altitude: 670 feet.

Quaternary system:			
Recent and Pleistocene series:			
Fill; sand	3	3	
Fill; brown and gray sandy clay with some stones	4	7	
Peat, silty, black, with trace of sand	13	20	
Marl, gray, and peat	22	42	
Silt, gray, and clay	7	49	
Sand, silty, brown, with trace of gravel	3	52	

Well 36/5W-18D1

Type of record: Driller's log. Altitude: 680 feet.

Quaternary system:			
Recent and Pleistocene series:			
Sand, brown	8	8	
Clay, gray, and gravel	36	44	
Sand, fine, muddy	6	50	
Sand, fine to medium	3	53	
Clay, sandy, gray, and gravel	19	72	
Sand, fine	18	90	

Well 36/5W-18D2

Type of record: Driller's log. Altitude: 702 feet.

Quaternary system:			
Recent and Pleistocene series:			
Fill	1	1	
Silt, sandy, slightly clayey, brown	2	3	
Clay, medium to hard, silty, with gravel	12	15	
Clay, medium, silty, gray, with embedded sand and gravel	27	42	

Well 36/5W-18E2

Type of record: Driller's log. Altitude: 702 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Sand, silty, brown	2	2	
Clay, medium, sandy, brown, silty with depth	5	7	
Silt, brown	7	14	
Sand, coarse, brown	2	16	
Clay, medium, silty, gray, with embedded sand, gravel, and shale fragments	39	55	
Sand, fine, gray, with silt seams and trace of gravel	5	60	

Well 36/5W-18E3

Type of record: Driller's log. Altitude: 702 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Clay, stiff, silty, brown, calcareous	8	8	
Silty, brown and gray	6	14	
Clay, stiff, silty, gray, with embedded sand and gravel	28	42	

Well 36/5W-18E4

Type of record: Driller's log. Altitude: 704 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Fill; brown clayey sand	2	2	
Clay, silty, medium, brown, with trace of reddish sand and gravel	4	6	
Sand, silty, tan, with trace of gravel	9	15	
Sand, fine, gray	5	20	
Clay, hard, silty, gray, with embedded gravel, coarse sand, and shale fragments	32	52	

Well 36/5W-18G1

Type of record: Driller's log. Altitude: 664 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Clay, soft, sandy, gray	7	7	Organic matter at bottom of deposit.
Silt, gray	3	10	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Well 36/5W-18G1--Continued

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Sand, coarse, gray----------	10	20	
Clay, soft, silty, gray, with embedded sand and gravel------	12	32	

Well 36/5W-18H2

Type of record: Driller's log. Altitude: 666 feet.

Quaternary system:			
Recent and Pleistocene series:			
Fill; brown sand----------	5	5	
Peat, black----------	1	6	
Sand, gray, with peat----------	2	8	
Marl, very soft, and silt; sandy----------	13	21	
Sand, black, silt, and gravel; with peat----------	1	22	
Silt, gray, with trace of sand--	6	28	
Clay, silty, gray----------	4	32	Till.

Well 36/5W-18H3

Type of record: Driller's log. Altitude: 665 feet.

Quaternary system:			
Recent and Pleistocene series:			
Silt, sandy, brown----------	3	3	
Peat, silty, black, and marl; with trace of gravel----------	4	7	
Clay, silty, gray, with embedded sand and gravel--------	6	13	Till.
Sand, fine to coarse, gray, and gravel----------	3	16	
Sand with silty clay layers-----	6	22	
Sand, gray, and gravel----------	4	26	

Well 36/5W-18H4

Type of record: Driller's log. Altitude: 664 feet.

Quaternary system:			
Recent and Pleistocene series:			
Silt, sandy, brown----------	3	3	
Silt, brown and black, and clay; with organic matter----------	2	5	
Silt, marly, gray, with sand and gravel----------	4	9	
Silt, gray and brown, with some sand in layers----------	4	13	
Clay, silty, gray----------	13	26	Till.

Well 36/5W-18H5

Type of record: Driller's log. Altitude: 668 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Silt, sandy, dark-brown	4	4	
Sand, fine, dark-gray, with trace of organic matter, gravel, and marl	11	15	
Sand, fine, gray, with trace of gravel	5	20	
Clay, medium, silty, gray, with embedded sand and gravel	10	30	
Sand, coarse, gray, and gravel	10	40	
Clay, stiff, silty, gray, with embedded sand and gravel	2	42	

Well 36/5W-22D1

Type of record: Driller's log. Altitude: 822 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Clay, medium, brown	20	20	
Sand, medium, brown	88	108	
Sand, medium, white	8	116	
Clay, medium, gray	4	120	
Sand, medium, white	9	129	

Well 36/5W-25A1

Type of record: Driller's log. Altitude: 780 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Clay, mixed; yellow	18	18	
Clay, blue	6	24	
Hardpan	12	36	Hard clay?.
Sand, red	22	58	
Sand, gray	17	75	

Well 36/5W-28Q1

Type of record: Driller's log. Altitude: 725 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Gravel, sand, and clay	80	80	
Devonian system:			
Upper Devonian series:			
Shale, calcareous, black	100	180	
Limestone, black	10	190	
Shale, sandy, black	3	193	
Shale, calcareous, black	86	279	

Well 36/5W-28Q1--Continued

Material	Thickness (feet)	Depth (feet)	Remarks
Devonian system:			
Middle Devonian series:			
Lime, sandy----------	5	284	Has oil.

Well 36/5W-30N1

Type of record: Driller's log. Altitude: 850 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, hard, yellow----------	30	30	
Clay, blue----------	18	48	
Gravel and shale----------	20	68	
Sand, light----------	50	118	
Sand, coarse, gray----------	18	136	

Well 36/5W-31B1

Type of record: Driller's log. Altitude: 860 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, light-gray----------	45	45	
Sand----------	235	280	
Devonian system:			
Upper Devonian series:			
Shale, blue----------	36	316	
Shale, brown----------	120	436	
Middle Devonian series:			
Lime, gray----------	4	440	

Well 36/6W-1H1

Type of record: Driller's log. Altitude: 645 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, medium, brown----------	8	8	
Sand, medium, brown----------	67	75	
Sand, medium, gray----------	14	89	

Well 36/6W-2E2

Type of record: Driller's log. Altitude: 639 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, yellow, and brown sand----	21	21	
Sand and gravel; brown----------	3	24	
Sand, gray, with thin blue clay layers----------	7	31	
Sand, medium, gray----------	5	36	

Well 36/6W-5N1

Type of record: Driller's log. Altitude: 625 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Clay, firm, yellow	16	16	
Sand, firm, yellow	3	19	
Sand, firm, orange	10	29	
Clay, soft, light-gray	2	31	
Sand, hard, reddish-orange	30	61	
Sand, hard, gray	6	67	

Well 36/6W-6H1

Type of record: Driller's log. Altitude: 598 feet.

Quaternary system:			
Recent and Pleistocene series:			
Sand, fine, silty, black, and organic matter	10	10	
Sand, fine to medium, brown, with little silt	30	40	
Sand, fine to medium, light-brown, with some silt	10	50	

Well 36/6W-7F1

Type of record: Driller's log from memory. Altitude: 658 feet.

Quaternary system:			
Recent and Pleistocene series:			
Sand, yellow	18	18	
Clay, blue	39	57	
Silt	13	70	
Sand	15	85	

Well 36/6W-8L2

Type of record: Driller's log. Altitude: 605 feet.

Quaternary system:			
Recent and Pleistocene series:			
Top soil	7	7	Muck.
Marl	1	8	
Sand	1	9	
Sand, muddy	13	22	
Clay, gray	9	31	

Well 36/6W-8M1

Type of record: Driller's log. Altitude: 633 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, sandy	2	2	
Sand, muddy, yellow	14	16	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Well 36/6W-8M1--Continued

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Sand, fine, brown	6	22	
Sand, brown	6	28	
Silt, sandy, muddy	2	30	
Sand, dirty	8	38	
Silt, sandy	1	39	
Sand, little muddy	6	45	
Sand	15	60	
Sand, brown, with chunks of clay	1	61	
Sand, brown	15	76	
Sand	2	78	Almost silt.
Sand, brown	2	80	
Clay, silty	7	87	

Well 36/6W-8N1

Type of record: Driller's log. Altitude: 633 feet.

Quaternary system:			
Recent and Pleistocene series:			
Top soil	2	2	
Clay, sandy	4	6	
Sand, fine	16	22	
Sand	13	35	
Sand and gravel	6	41	
Clay	14	55	
Sand	10	65	Clay at 65 feet.

Well 36/6W-8N2

Type of record: Driller's log. Altitude: 633 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay	4	4	
Sand	27	31	
Sand, fine	4	35	
Clay	1	36	
Sand, fine	4	40	
Clay	30	70	

Well 36/6W-9E2

Type of record: Driller's log. Altitude: 635 feet.

Quaternary system:			
Recent and Pleistocene series:			
Top soil	15	15	
Clay and sand	5	20	
Sand, yellow	15	35	
Gravel and sand	5	40	
Clay	35	75

Quaternary system:			
Recent and Pleistocene series:			
Sand, silty, dark-brown	2	2	
Clay, soft, organic, gray	14	16	Silty near top.
Marl, soft, clayey, organic, gray	12	28	Silty near bottom.
Sand, fine, gray	5	33	
Clay, medium, silty, gray, with embedded sand and gravel	11	44	

Well 36/6W-17H1

Type of record: Driller's log. Altitude: 638 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Silt, clayey, brown	2	2	
Sand, fine, brown	33	35	
Sand, fine, gray	15	50	
Silt, stiff, gray, with embedded sand and gravel	6	56	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Well 36/6W-17K3

Type of record: Driller's log. Altitude: 611 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Silt, sandy, organic	6	6	
Sand, fine, brown, with trace of silt	9	15	
Silt, tan and gray, with trace of fine sand, fine gravel, and clay	3	18	
Clay, soft, silty, blue	5	23	
Sand, fine, tan, with trace of silt and fine gravel	17	40	
Clay, stiff, gray, with trace of silt	2	42	

Well 36/6W-17K7

Type of record: Driller's log. Altitude: 611 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Sand, silty, dark-brown	2	2	
Silt, organic, brown	3	5	
Sand, fine, silty, organic, brown	8	13	
Marl, soft, clayey, organic	9	22	
Sand, silty, gray	6	28	
Clay, very soft, marly, sandy, gray	10	38	
Sand, silty, gray	7	45	
Clay, medium, silty, gray, with embedded sand and gravel	11	56	

Well 36/6W-17K9

Type of record: Driller's log. Altitude: 610 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Silt, gray and brown	2	2	
Clay, soft, gray and brown	3	5	
Sand, fine, silty, gray, with organic clay seams	5	10	
Marl, soft, sandy, clayey, organic	20	30	
Sand, fine, gray, with shell fragments and lignite	15	45	
Clay, stiff, silty, gray, with embedded sand and gravel	7	52	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Well 36/6W-17K10

Type of record: Driller's log. Altitude: 610 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Silt, sandy, dark-brown	3	3	
Clay, soft, organic, dark-brown	1	4	
Clay, soft, gray, stratified with sand seams	2	6	
Marl, very soft, sandy, clayey, dark-gray	30	36	
Clay, stiff, silty, gray, with embedded sand and gravel	26	62	

Well 36/6W-17K11

Type of record: Driller's log. Altitude: 612 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Sand, silty, dark-brown	4	4	
Clay, stiff, gray	1	5	
Sand, soft, clayey, gray	2	7	
Clay, very soft, sandy, gray	1	8	
Sand, fine, gray	12	20	
Marl, soft, clayey, organic, gray	8	28	Sandy near bottom.
Sand, fine, gray	6	34	
Clay, medium, silty, tan and gray, with embedded sand and gravel	11	45	

Well 36/6W-17L1

Type of record: Driller's log. Altitude: 636 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Silt, clayey, black	2	2	
Sand, medium, tan, with trace of silt	2	4	
Sand, fine, silty, tan	2	6	
Clay, medium, sandy, with embedded gravel	2	8	
Sand, fine, tan, with trace of silt	14	22	
Sand, medium, gray	4	26	

Table 3.--Selected logs of wells and test holes in Porter County--Continued

Well 36/6W-17L3

Type of record: Driller's log. Altitude: 634 feet.

Material	Thickness (feet)	Depth (feet)	Remarks
Quaternary system:			
Recent and Pleistocene series:			
Top soil, silty, dark-brown	2	2	
Silt, stiff, tan, with some clay	2	4	
Sand, fine, silty, tan	21	25	
Clay, medium, tan	5	30	
Sand, fine, silty, tan	2	32	

Well 36/6W-17M1

Type of record: Driller's log. Altitude: 636 feet.

Quaternary system:			
Recent and Pleistocene series:			
Silt, brown and gray	2	2	
Sand, fine, brown	3	5	
Sand, fine, brown, with soft clay seams	1	6	
Sand, fine, brown	9	15	
Sand, fine, silty, brown	20	35	
Sand, fine, silty, gray	25	60	
Silt, gray	6	66	

Well 36/6W-17M3

Type of record: Driller's log. Altitude: 635 feet.

Quaternary system:			
Recent and Pleistocene series:			
Clay, soft, silty, brown	4	4	
Sand, clayey, brown	1	5	
Sand, fine, brown	10	15	
Sand, fine, silty, brown	10	25	
Sand, fine, silty, brown, with clay seams	5	30	
Sand, fine, silty, gray	20	50	
Sand, fine, silty, gray, with clay seams	16	66	

Well 36/6W-18C2

Type of record: Driller's log. Altitude: 635 feet.

Quaternary system:			
Recent and Pleistocene series:			
Sand, fine, brown, with trace of clay	4	4	
Clay, soft, silty	1	5	
Sand, fine, brown	15	20	
Sand, fine, gray	20	40	
Sand, fine, gray, with trace of soft clay	20	60

Table 4.--Records of springs in Porter County, Indiana

Spring: See text for description of well-numbering system.

Altitude: Altitude of land-surface datum from topographic map.

Material: D, drift; G, gravel; M, muck; Sd, sand.

Geologic age: Pl, Pleistocene; R, Recent.

Use: D, domestic; N, none; P, public supply; S, stock.

Flow: E, estimated; M, measured.

Field chemical analyses: In parts per million; water samples collected on date of measurement, except where otherwise noted in remarks.

Remarks: gpm, gallons per minute.

Spring	Owner	Altitude (feet)	Material	Geologic age	Use	Flow (gpm)	Date of measurement	Field chemical analyses						Remarks

Table 6.--Water levels in observation wells in Porter County, Indiana
(In feet below land-surface datum. Water level: e, estimated; h, tape measurement)

Porter 1. (35/5W-6L5). City of Valparaiso. Valparaiso Water Dept. NE¼SW¼ sec. 6, T. 35 N., R. 5 W. Drilled unused water-table well in sand, diameter 2 inches, depth 89 feet. Land-surface datum is 803 feet above msl. Highest water level is 48.28 below lsd, July 8, 1952; lowest 70.31 below lsd, Oct. 29, 1957. Records available: 1935-58. Affected by nearby pumping.

Porter 9. (35/7-27C1). H. Hull. NE¼NW¼ sec. 27, T. 35 N., R. 7 W. Drilled unused artesian well in limestone, diameter 8 to 6 inches, reported depth 379 feet. Land-surface datum is 684 feet above msl. Recording gage installed Aug. 6, 1957. Highest water level is 23.60 below lsd, Feb. 28, 1958; lowest 24.69 below lsd, Oct. 12, 1957. Records available: 1957-58. Affected by barometric pressure.

(Daily highest water level from recorder graph, 1957)

EXPLANATION

Production from sand and gravel. Well depths generally more than 25 and less than 150 feet. Yields adequate to more than adequate for domestic use. Larger yields possible

Production from glaciofluvial sand and gravel. Depths of domestic wells generally less than 50 feet. Depths of industrial wells generally deeper. Yields adequate to more than adequate for domestic use. Larger yields possible locally

Production from glaciofluvial sand and gravel. Well depths generally more than 50 feet and less than 100 feet. Yields adequate to more than adequate for domestic use. Larger yields possible

Production from glaciofluvial sand with some gravel. Well depths generally more than 65 feet and less than 160 feet. Sand layers discontinuous. Locally very fine-grained and thin. Yields small but generally adequate for domestic use

Production from glaciofluvial sand and gravel. Well depths generally 75 to more than 125 feet. Shallower production possible locally. Yields adequate to more than adequate for domestic use. Large yields possible locally
