INTRODUCTION

This report contains 2006 data for the TARP Calumet Tunnel System compiled from the monitoring of the groundwater level elevations in the observation wells and monitoring of water quality in the water quality monitoring wells. The observation and monitoring wells are located along the Calumet Tunnel System. The tunnel between Crawford Avenue and the Calumet Water Reclamation Plant has four water quality wells (QC-1, QC-2, QC-2.1, and QC-2.2) and 11 observation wells (OC-1 through OC-11). The tunnel between 140th Street and Indiana Avenue has 17 water quality wells (QC-3 through QC-19). The tunnel on the Torrence Avenue leg has nine water quality wells (QC-20 through QC-28). The tunnel along the Little Calumet leg has nine water quality wells (QC-29 through QC-37).

Water quality monitoring wells QC-1, QC-2, and QC-29 through QC-37 are sampled six times per year (Illinois Environmental Protection Agency [IEPA] memorandum July 9, 2004). Water quality monitoring wells QC-2.1, QC-2.2, QC-3 through QC-7 (QC-8.1 is a dry well), and QC-9 through QC-28 are sampled three times per year (IEPA memoranda July 9, 2004, and February 23, 2006). Water level readings are taken at the same frequency. Groundwater observation wells OC-1 through OC-11 are sampled once every two weeks.

Monitoring Data

Appendix AI contains a location map of observation wells OC-1 through OC-11 located along the Calumet Tunnel System.

Table AII-1 in Appendix AII contains groundwater elevation data for 2006 for observation wells OC-1 through OC-11 shown in Appendix AI. Table AII-1 also contains the yearly minimum, mean, and maximum water level elevations of each observation well.

Appendix AIII contains a location map of the water quality monitoring wells QC-1, QC-2, QC-2.1, QC-2.2, QC-3 through QC-7, and QC-9 through QC-37 located along the Calumet Tunnel System.

Tables AIV-1 and AIV-2 in Appendix AIV contain water quality monitoring data for 2006 pertaining to the water quality wells QC-1, QC-2, QC-2.1, QC-2.2, and QC-3 through QC-37 (except for QC-8.1 which is a dry well) along the Calumet Tunnel System shown in Appendix AIII.

All of the wells in the Calumet system were visited for the required number of samples. However, in some instances the samples could not be collected. Water quality well QC-20 was not sampled on January 12, 2006, March 1, 2006, or April 3, 2006, because the pump fell into the well and could not be retrieved. Water quality well QC-2.1 could not be sampled on March 30, 2006, or April 13, 2006, because there was insufficient water in the well to collect a sample. Water quality wells QC-32 through QC-36 could not be sampled during 2006 because there was insufficient water in the wells to collect a sample. Water quality well QC-37 was not sampled on

January 26, 2006, April 20, 2006, June 15, 2006, August 23, 2006, or November 2, 2006, because there was insufficient water in the well.

Summary of Data

Observation Well Water Level Elevation Data. In Figure 1, the 2006 groundwater level elevation data for the observation wells (OC–1 through OC–11) of the Calumet Tunnel System have been plotted. In this figure, yearly minimum, mean, and maximum water level elevations of all 11 wells are plotted to show fluctuations in the water level elevations during 2006. Table AII–1 in Appendix AII contains the entire groundwater level elevation data for 2006 for all the observation wells in the Calumet Tunnel System.

Water Quality Monitoring Well Data. Tables 1 through 8 contain summary statistics of the water quality parameters for 2006 for water quality monitoring wells QC–1, QC–2, QC–2.1, QC–2.2, and QC–3 through QC–37 (except for well QC–8.1 which is a dry well) in the Calumet Tunnel System. These statistics were computed from the data collected from each water quality monitoring well in 2006. The summary statistics include minimum, mean, maximum, standard deviation (Std. Dev.), median and coefficient of variation (Coeff. Var.) for the nine water quality parameters analyzed during 2006. The nine water quality parameters are: chloride (Cl), conductivity (Cond.), fecal coliform (FC), hardness as CaCO_3 (Hard.), ammonia as $\text{NH}_4^+ \text{--N}$, pH, sulfate (SO_4), total dissolved solids (TDS), and total organic carbon (TOC).

TABLE 1: SUMMARY STATISTICS OF THE 2006 DATA FOR THE WATER QUALITY MONITORING WELLS IN THE CALUMET TUNNEL SYSTEM:
WELLS QC-1, QC-2, QC-2.1, QC-2.2, AND QC-3

Parameter	Well Number				
	QC-1	QC-2	QC-2.1	QC-2.2	QC-3

*Relative to Chicago City Datum.

**Access to well blocked by fallen tree. Tree has been removed.

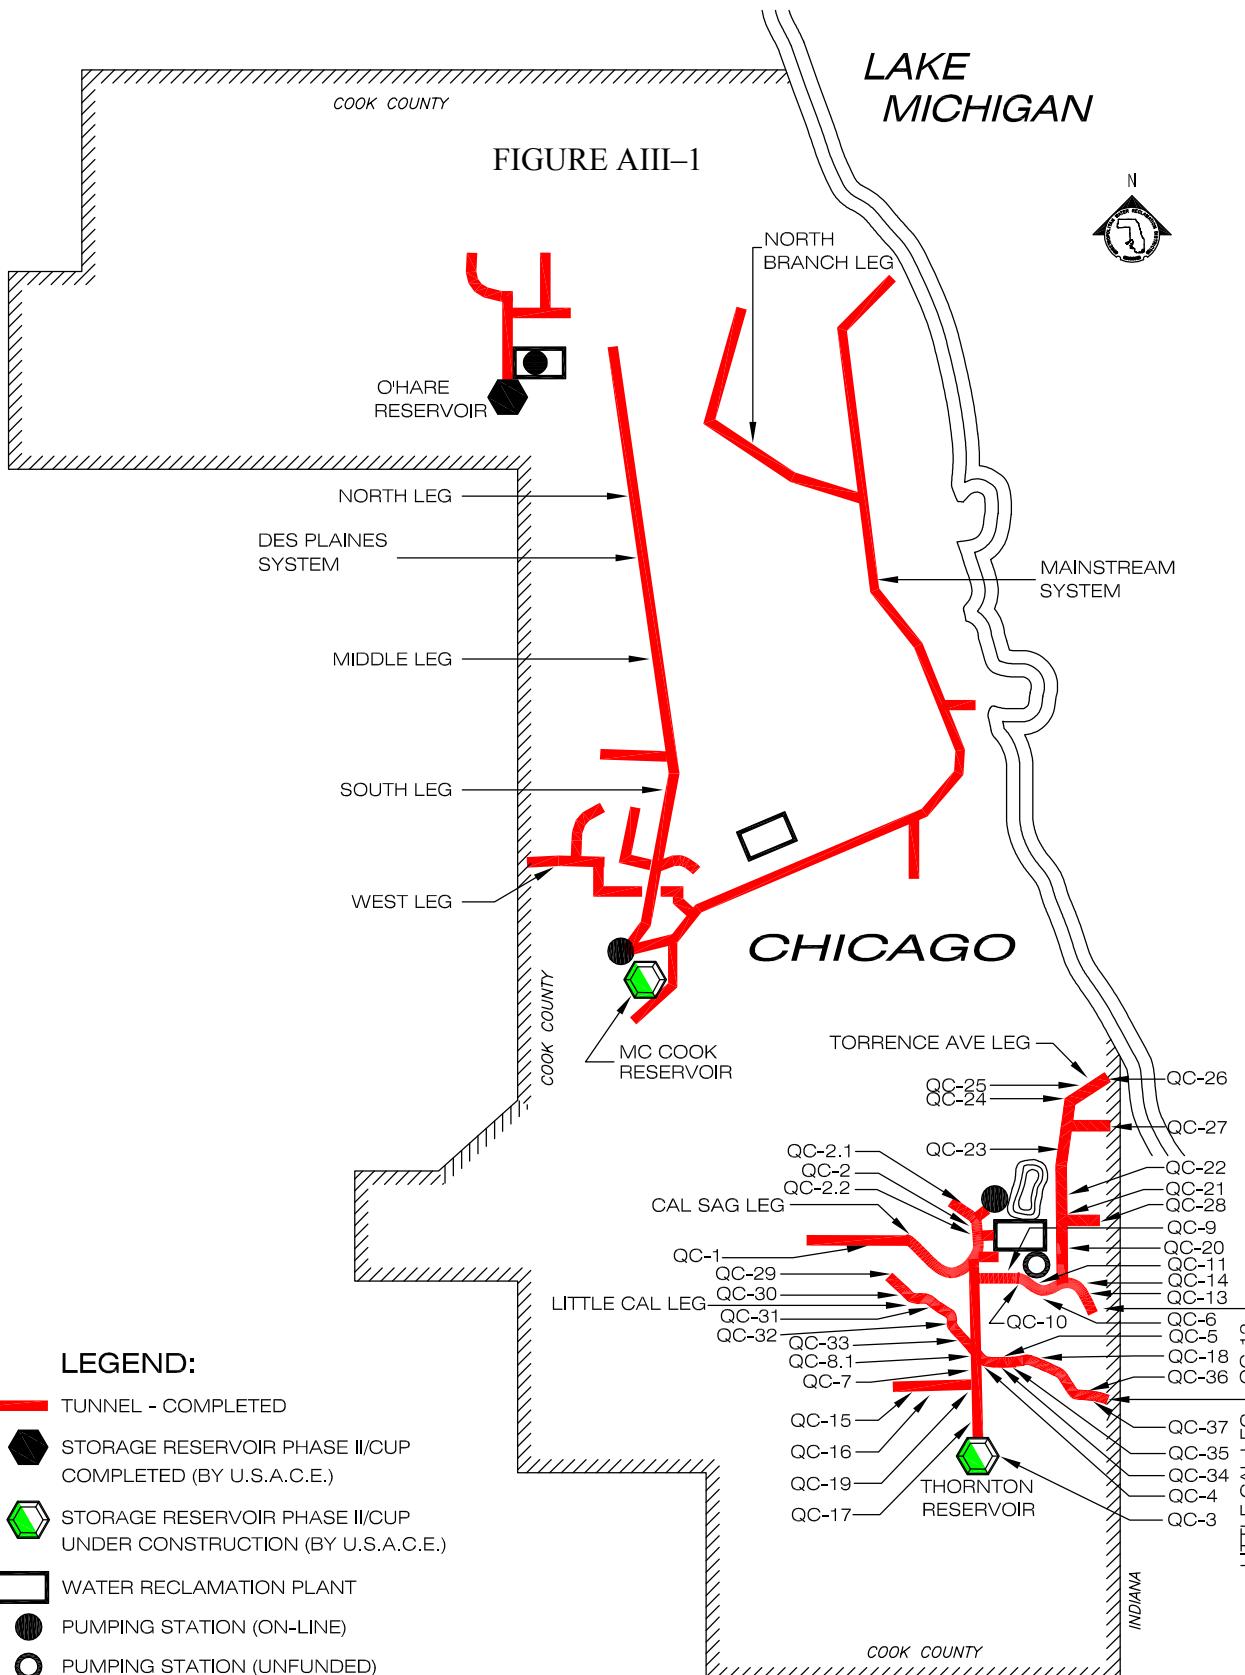

***Access to well blocked by piled-up debris.

****Gate locked, unable to access well.

*****Access road to well blocked.

APPENDIX AIII

**LOCATION MAP OF GROUNDWATER QUALITY MONITORING WELLS
QC-1, QC-2, QC-2.1, QC-2.2, QC-3 THROUGH QC-7, AND QC-9 THROUGH QC-37
IN THE CALUMET TUNNEL SYSTEM**

CALUMET TUNNEL SYSTEM LOCATION MAP OF GROUNDWATER QUALITY MONITORING WELLS

METROPOLITAN WATER RECLAMATION
DISTRICT OF GREATER CHICAGO

APPENDIX AIV

2006 GROUNDWATER QUALITY DATA FOR MONITORING WELLS
QC-1, QC-2, QC-2.1, QC-2.2, QC-3 THROUGH QC-7, AND QC-9 THROUGH QC-37
IN THE CALUMET TUNNEL SYSTEM

TABLE AIV-1: 2006 pH, CONDUCTIVITY, TEMPERATURE, HARDNESS,
 AMMONIA NITROGEN, AND CHLORIDE DATA FOR WATER QUALITY MONITORING
 WELLS QC-1, QC-2, QC-2.1, QC-2.2, QC-3 THROUGH QC-7, AND QC-9 THROUGH

¹Unfiltered samples, all others were filtered through 0.45 µm membrane.

²Water level elevations are relative to Chicago City Datum.

³Refers to elapsed time after initial drawdown before the well recovered sufficiently for sampling.
